BUSINESS SUMMARY

Fuel Systems Solutions, Inc. engages in the design, manufacture, and supply of alternative fuel components and systems for use in the transportation, industrial, and power generation industries. Its components and systems control the pressure and flow of gaseous alternative fuels, such as propane and natural gas used in internal combustion engines. The company offers a range of gaseous fuel components, including fuel delivery pressure regulators, fuel injectors, flow control valves, and other components to control the pressure, flow, and/or metering of gaseous fuels; electronic controls, such as solid-state components and proprietary software that monitor and optimize fuel pressure and flow for engine requirements; and gaseous fueled internal combustion engines. It also provides systems integration support to integrate the gaseous fuel storage, fuel delivery, and/or electronic control components and sub-systems; various ancillary components for systems operation on alternative fuels; and engineering and systems integration services. The company supplies its products and systems primarily to automobile manufacturers, taxi companies, transit and shuttle bus companies, and delivery fleets through a network of distributors and dealers, as well as through a sales force that develops sales with distributors, original equipment manufacturers, and end-users. Fuel Systems Solutions, Inc. was founded in 1958 and is headquartered in Santa Ana, California.
